LAHRI MOHAMED

Full-Stack Development with Java Spring Boot · React / Angular and Artificial Intelligence Integration

Applying for a PFA Internship ***(3 months · July – October 2027 · on-site or remote)***

Oujda, Morocco | +212 632 041 119 | mohamed.lahri200@gmail.com

PROFILE

Second-year engineering student in Computer Engineering at ENSA Oujda, specializing in Software Engineering and Artificial Intelligence. Full-Stack (Java, Spring Boot, REST APIs, React, Angular) and mobile (Android/Kotlin, Flutter) developer with hands-on experience integrating AI into production through several academic and personal projects: Machine Learning, LLMs, NLP and RAG. Familiar with DevOps culture (Docker, Kubernetes, Terraform) and comfortable on Linux and Windows. Autonomous, rigorous and results-driven, I am looking for a **PFA internship from July to October 2027** to design and deploy intelligent full-stack solutions.

EXPERIENCE & ACTIVITIES

Intern — Web Application Development — 3LM Solutions | *AI-assisted recruitment · Remote* **Oct. 2026 – Present**

- Candidate–project matching module for a recruitment web app: rule-based filters without AI (dates, duration, work mode, technologies), then score, level and explanation via the Claude API.
- Stack: Python, FastAPI, Pydantic v2, PostgreSQL (SQLAlchemy 2, Alembic), React 19 + Vite, pytest/Vitest tests, Docker Compose.
- Weekly job (APScheduler) identifying project ideas in CVs, sent by email; shared Git repository, working in a pair.

Software Engineering & AI Intern — 3LM Solutions | *Tunisia · Remote* **Jul. – Aug. 2026**

- Optimized the file management module: duplicate detection up to 3.46x faster, large-folder traversal 3.04x faster.
- Reduced code duplication by ~8% with a centralized error-handling decorator (9 functions); fixed UI freezes during long-running actions by running them in separate threads.
- Stable interface contract between 9 business functions and an AI module (Gemini), secured by automated regression tests.
- Delivered through a professional Git workflow: branches, documented Pull Requests, code reviews.

Intern — Mohammed VI University Hospital (CHU), Oujda | *Full-Stack & Medical AI* **2 months**

- Developed an AI and Machine Learning–based platform to assist with patient triage, prioritization and referral based on symptoms and vital signs.
- Set up a React/TypeScript, Spring Boot, FastAPI/Python and MySQL architecture aimed at reducing patient care time and supporting healthcare professionals' decisions.

Participant — Miathon 4 **2025/2026**

- Developed a smart camera that detects out-of-stock shelves in a supermarket.

Participant — Rally IA (1st edition) | *Ministry of Digital Transition and Administrative Reform — Merzouga* **2025/2026**

- AI-based smart platform for blood management and transport.
- Optimization of blood stock and deliveries in Morocco — because every second counts.

Active Member | *ENSA Oujda Computer Science Club* **2023 – Present**

- Participation in hackathons and inter-class programming competitions.
- Led workshops on artificial intelligence and emerging technologies.

TECHNICAL PROJECTS

APOGEE Platform — University Management | *Full-Stack Web & Machine Learning* **2025 – 2026**

- Developed a complete web platform (React, Spring Boot, JavaScript, MySQL): authentication and dashboards.
- Integrated a Machine Learning model to predict student academic orientation.

Intelligent Report Generator | *Artificial Intelligence & LLMs* **2025 – 2026**

- Automated report generation tool based on prompt engineering (CO-STAR, RODE methods).
- Optimized prompts for greater personalization of the generated documents.

Heat Propagation Simulator | *Algorithms & Data Structures — C/C++* **2024/2025**

- Simulation of heat propagation in industrial materials, developed in C++ using linked lists as the data structure.
- Graphical visualization of the results with Gnuplot as the output interface.

Snake Game | *Python & Web Interface (HTML, CSS)* **2024/2025**

- Developed the game engine in Python and a user interface built with HTML5 and CSS3.

Modern Personal Portfolio | *Web Development — PHP, HTML, CSS* **2024 – 2025**

- Designed and developed a modern, responsive web portfolio with HTML5, CSS3 and PHP.

TECHNICAL SKILLS

Back-End: Java (OOP), Spring Boot, REST APIs, microservices architecture, FastAPI (Python)
Front-End: React, Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive Web Design
Mobile: Android (Kotlin), Flutter (Dart)
Artificial Intelligence: Machine Learning, NLP, RAG, LLMs (Gemini, Claude API), Prompt Engineering, AI integration in web apps
DevOps & Cloud: DevOps culture, Docker, Kubernetes, Terraform (Infrastructure as Code), CI/CD, Git/GitHub
Databases: SQL, MySQL, PostgreSQL | **Operating Systems:** Linux, Windows
Languages: Java, Kotlin, Dart, Python, PHP, C/C++, JavaScript, TypeScript
Tools & Methodologies: Git/GitHub (branches, Pull Requests, code reviews), automated testing, UML, Agile methods, Selenium
Computer Networks: TCP/IP protocols, IPv4 & IPv6 addressing, Routing, Subnetting (CIDR/VLSM)

EDUCATION

Engineering Degree in Computer Engineering — ENSA Oujda | *2nd year, Software Engineering & AI* **2025 – 2028**
Integrated Preparatory Cycle — ENSA Oujda | *With Honors (Mention Bien)* **2023 – 2025**
Baccalaureate in Mathematical Sciences A — Oujda | *With Honors (Mention Bien)* **2022 – 2023**

CERTIFICATIONS & LANGUAGES

- Prompt Engineering for Developers — DeepLearning.AI • Machine Learning Fundamentals — Coursera
- Java Programming and Software Engineering — Duke University • Git & GitHub — Atlassian
- **Arabic:** Native **French:** Fluent **English:** Intermediate (technical)
